# Executive Summary

## Content

Paradigm Transportation Solutions Limited (Paradigm) was retained to conduct this Transportation Impact Study and Parking Study for the St. Elizabeth Village Master Plan Development of the Village Square. The site is located at 393 Rymal Road West in the City of Hamilton.

This study is an update to a previous version which was submitted to the City in May 2023. This update addresses changes to the Village Square portion of the development located on the southeast corner of the Rymal Road West and Hazelton Avenue/Bishop Ryan Way intersection.

## Development Concept

The Village Square concept includes approximately 1,012 m<sup>2</sup> (10,893 sq.ft.) of ground floor retail, 1,012 m<sup>2</sup> (10,893 sq.ft.) of second floor office, approximately 374 apartment units, and 56 townhome units.

Vehicle access is proposed via the existing signalized intersection of Hazelton Avenue/Bishop Ryan Way at Rymal Road West. Bishop Ryan Way forms the south leg of the intersection and will operate a private driveway.

## Conclusions

The main findings and conclusions of this study are as follows:

### Transportation Impact Assessment

- ▶ **Existing Traffic Operations:** The study area intersections are operating with acceptable levels of service during the weekday AM, PM, and Saturday peak hours.
- ▶ **Site Trip Generation:** Upon full build-out, the subject site's total net trip generation is approximately 222 AM peak hour trips, 239 PM peak hour trips, and 234 Saturday peak hour trips.
- ▶ **Background Traffic Operations:** the study area intersections are forecast to operate with acceptable levels of service during the weekday AM, PM, and Saturday peak hours. The following critical movements are noted:
  - Rymal Road West and Hazelton Avenue/Bishop Ryan Way

- Westbound left-turn – queue length exceeds available storage during PM and Saturday peak hours. The westbound left-turn queue reach can be accommodated in the centre two-way left-turn lane. The average queue lengths can be accommodated in the westbound left-turn storage lane during the PM and Saturday peak hours.
  - ▶ **Total Traffic Operations:** The capacity deficiencies identified under background conditions will continue to occur with the addition of the site generated traffic. Site generated traffic results in the following critical movements:
    - Rymal Road West and Hazelton Avenue/Bishop Ryan Way
      - Eastbound through/right-turn – LOS D and v/c ratio of 0.98 during the Saturday peak hour; and
      - Westbound left-turn – LOS F, v/c ratio greater than 1.00, and queue length exceeds available storage during the PM peak hour.
  - ▶ **Remedial Measures:** To improve operations at the Rymal Road West and Hazelton Avenue/Bishop Ryan Way intersection an exclusive northbound left-turn lane as well as optimized signal phasing timing could be implemented upon build-out of the subject site. The concept plan illustrates a northbound left-turn lane with 30 metres of storage, which is forecast to contain the expected queue length.

With the improvements, the intersection of Rymal Road West and Hazelton Avenue/Bishop Ryan Way is forecast to operate with acceptable levels of service.

### Parking Study

- ▶ The proposed parking supply is 547 spaces.
- ▶ The proposed development requires a total of 402 to 602 parking spaces to comply with the City's Zoning By-law. With a proposed supply of 547 parking spaces the site's parking supply is within the zoning by-law design domain.

## Recommendations

Based on the findings of this study, it is recommended that:

- ▶ The City of Hamilton consider optimizing signal phases timings at the Rymal Road West and Hazelton Avenue intersection upon build-out of the subject site.
- ▶ The northbound left-turn lane on Bishop Ryan Way at Rymal Road West be constructed with at least 30-metres of storage.
- ▶ Parking for non-residents (visitors) be shared between all land uses.

# 1 Introduction

Paradigm Transportation Solutions Limited (Paradigm) was retained to conduct this Transportation Impact Study and Parking Study for the St. Elizabeth Village Master Plan Development of the Village Square. The site is located at 393 Rymal Road West in the City of Hamilton. **Figure 1.1** illustrates the site location.

This study is an update to the April 2022 TIS<sup>1</sup> which focuses on the Village Square portion of the development.

The scope of the study includes:

- ▶ Determine and assess the current study area traffic conditions;
- ▶ Forecast the additional traffic generated by the proposed development;
- ▶ Analyze the impacts of the additional traffic on the study area road network;
- ▶ Recommend necessary remedial measures required to mitigate the transportation impacts; and
- ▶ Estimate and analysis of the feasibility of the proposed parking supply.

Pre-study consultation for the update was sent to the City of Hamilton via email in March 2023. **Appendix A** contains the pre-study correspondence.

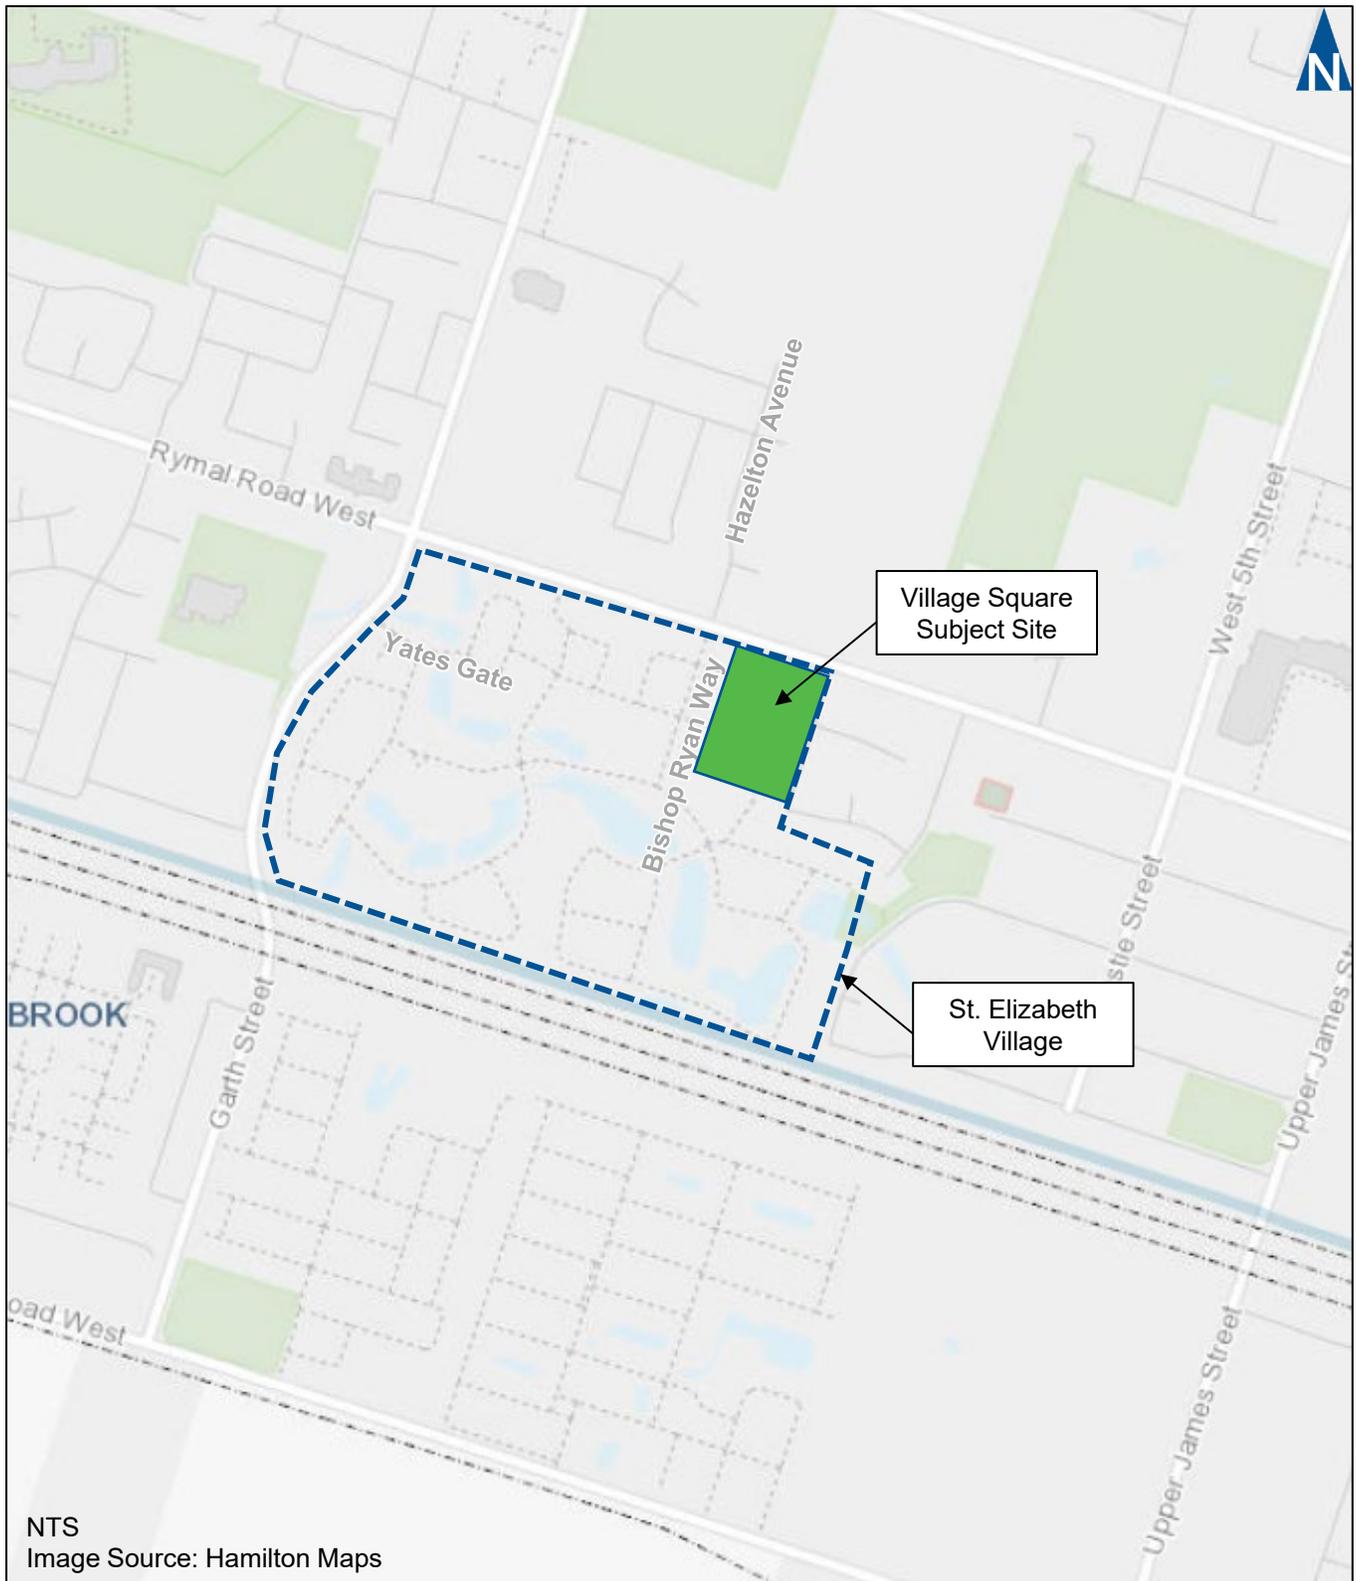

The study area intersections assessed in this study update include:

- ▶ Rymal Road West and Hazelton Avenue/Bishop Ryan Way (signalized)
- ▶ Bishop Tonnos Way and Bishop Ryan Way (unsignalized); and
- ▶ The two proposed driveway connections to Bishop Ryan Way.

---

*Transportation Impact Study & TDM Options Report Update*, (PTSL April 2022).

## 2 Existing Conditions

### 2.1 Roadway Characteristics

The characteristics of the roadways within the study area are described generally as follows:

- ▶ **Rymal Road West** is an east-west major arterial roadway. The roadway's cross-section is primarily urban with two travel lanes per direction. Across the site's frontage, this roadway has a five-lane cross section with two travel lanes in each direction and a two-way centre left-turn lane. Sidewalks are provided along both sides of this roadway east of Garth Street. The posted speed limit on this roadway is 60 km/h. The intersection with Hazelton Avenue/Bishop Ryan Way is signalized. There is a paved off-road cycle path on the north side of Rymal Road. There are no on-street cycle lanes.
- ▶ **Hazelton Avenue** is a north-south local roadway. The statutory speed limit on Hazelton Avenue is 40 km/h. Sidewalks are provided on both sides of this roadway. No cycling facilities are present along this roadway.
- ▶ **Bishop Ryan Way** is a private driveway opposite Hazelton Avenue. This roadway operates with a two-lane cross-section. At present there are no sidewalks along this roadway.

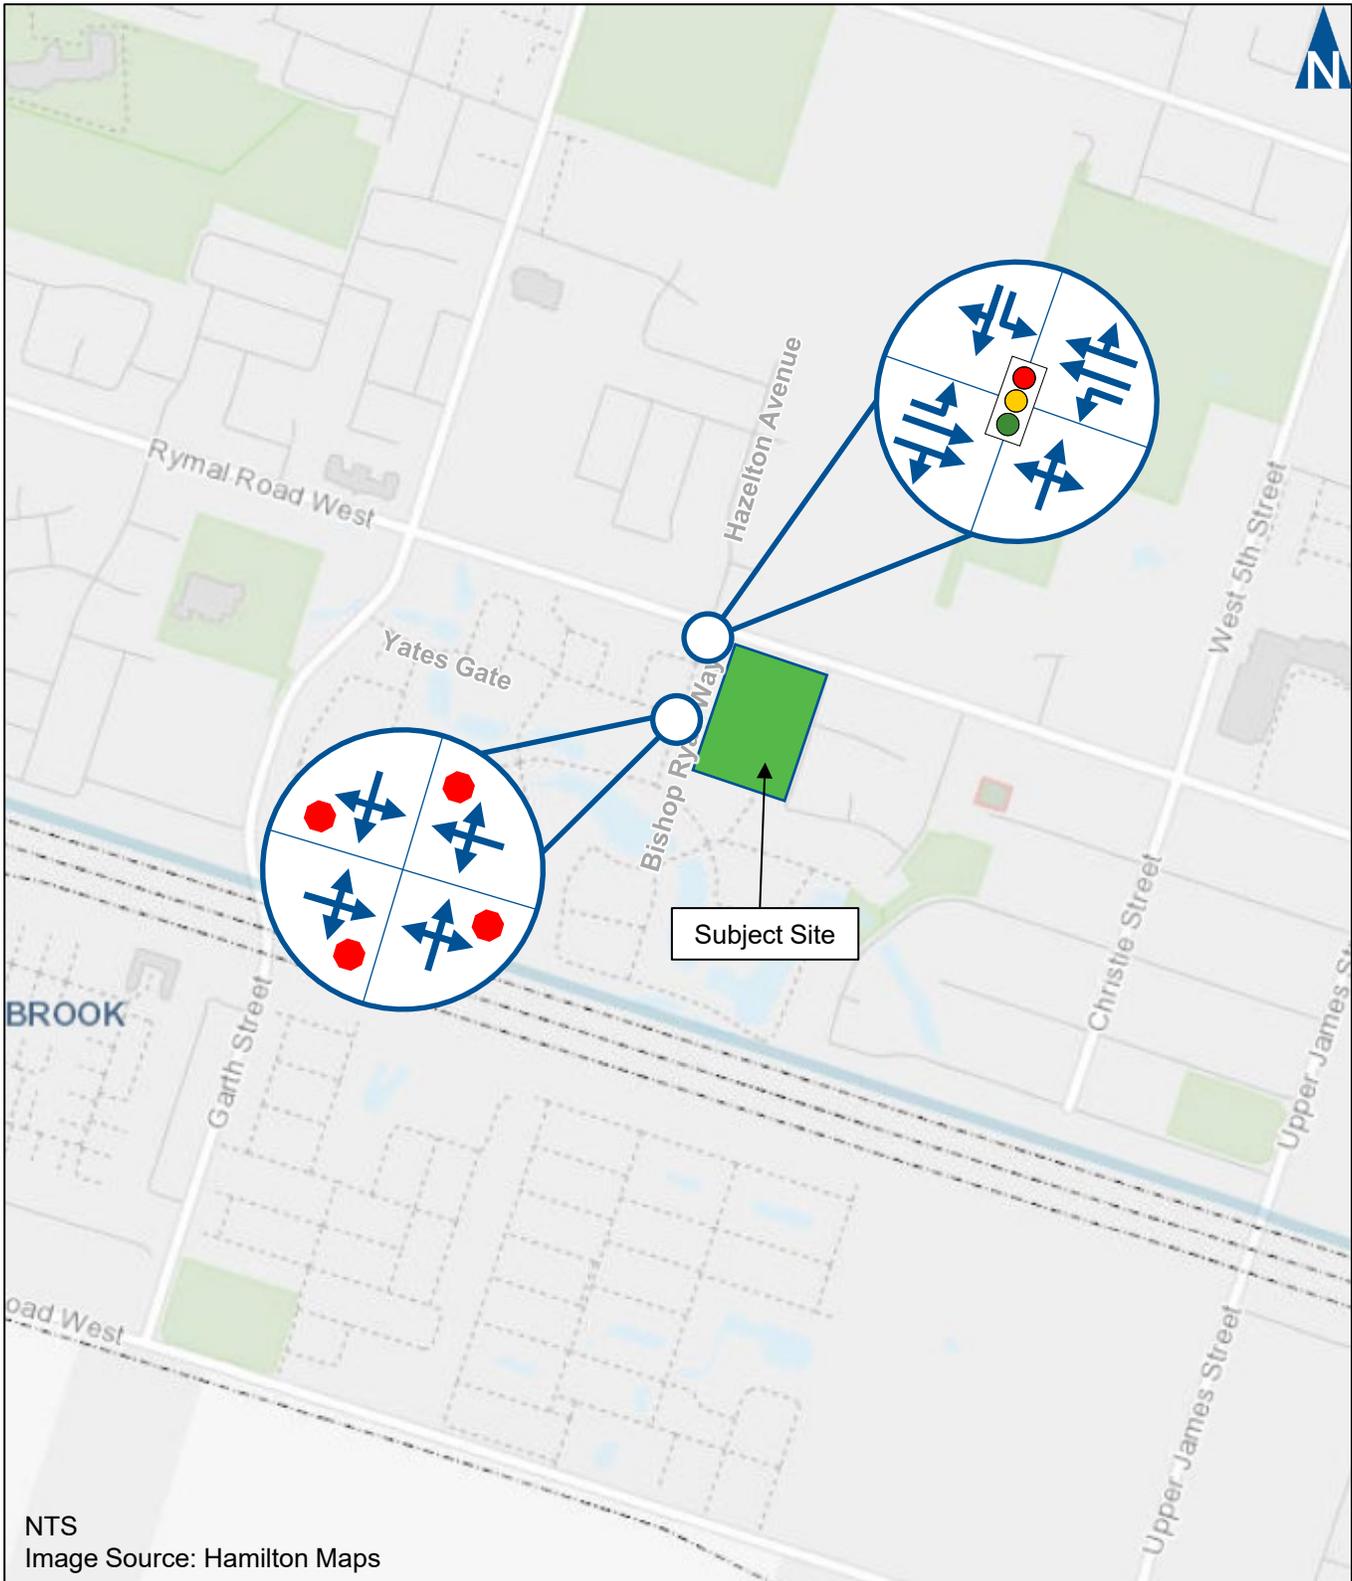

The internal intersection of Bishop Tonnos Way at Bishop Ryan Way operates as an all-way stop controlled intersection.

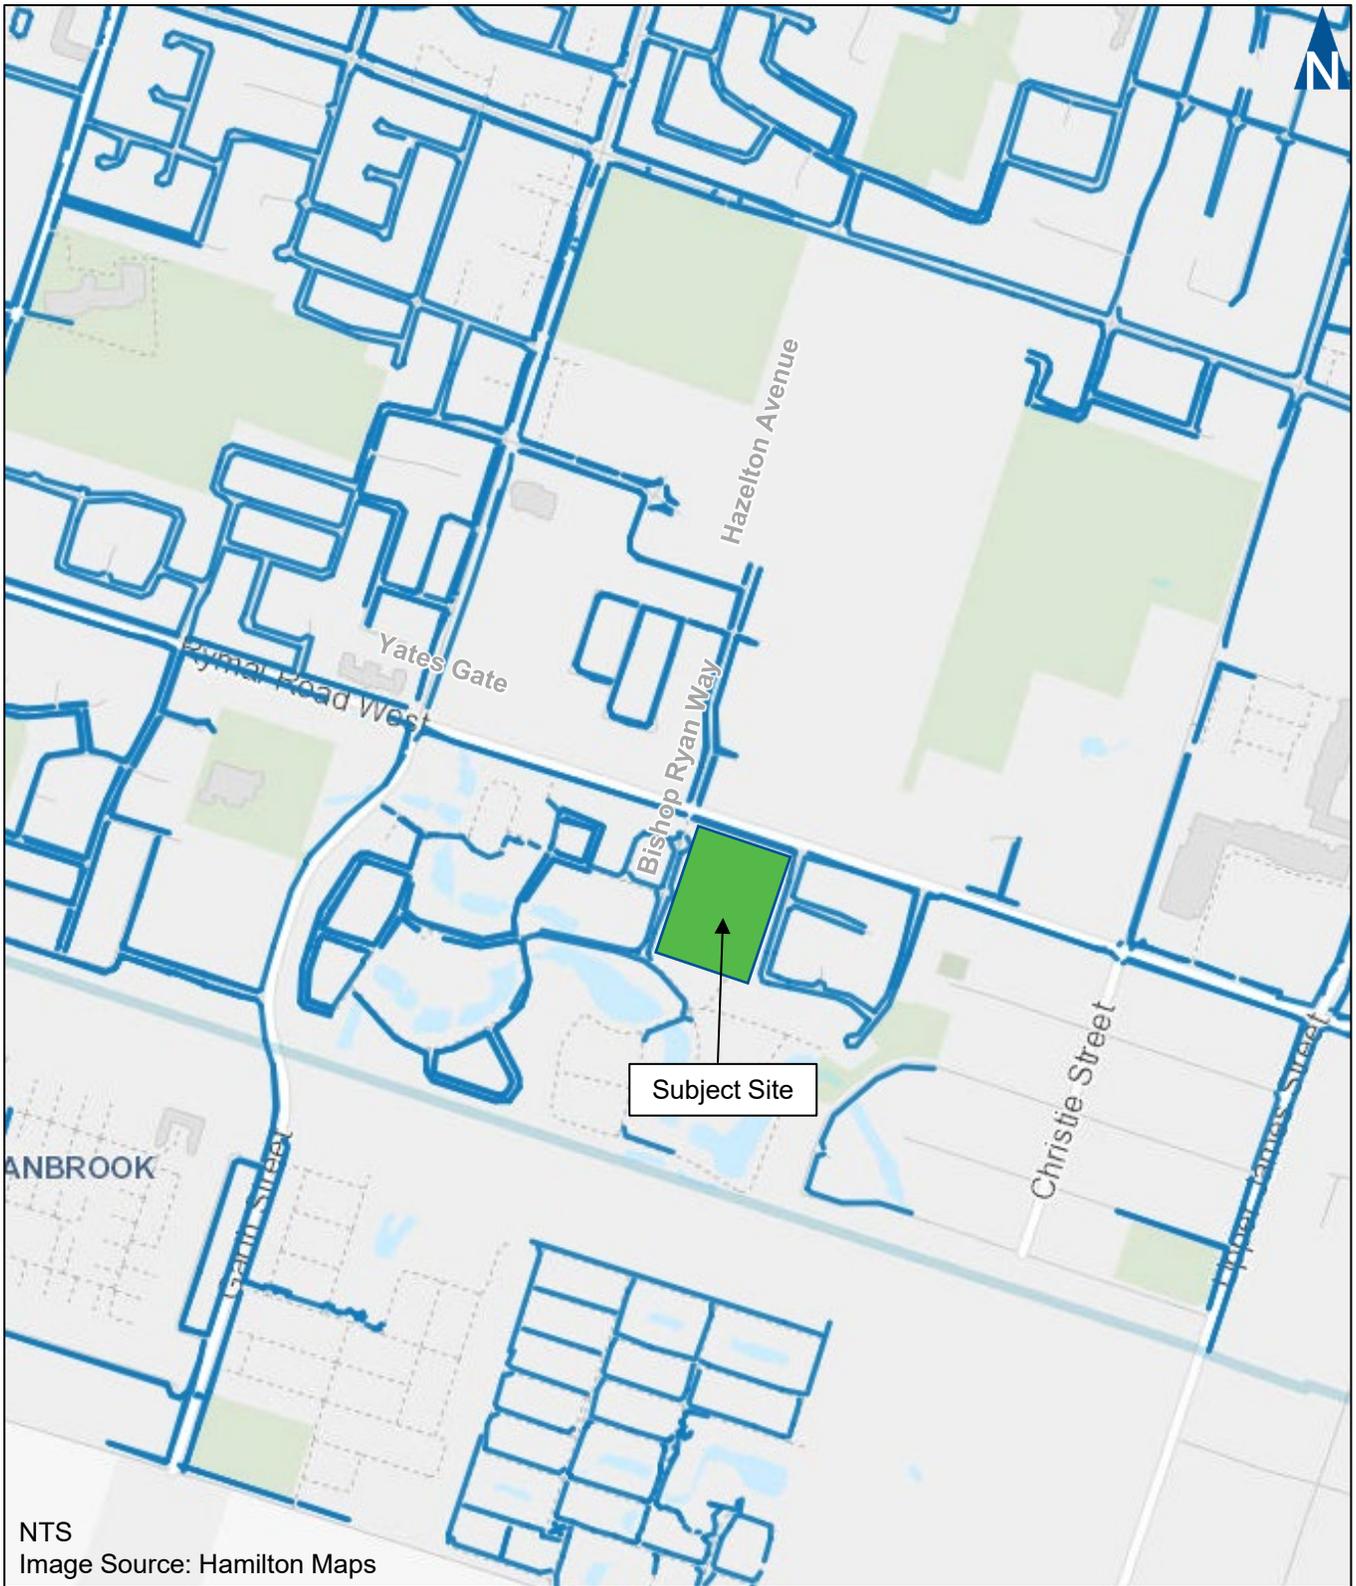

**Figure 2.1** illustrates the existing lane configurations and traffic control at the study area intersections.

### 2.2 Pedestrian Network

Sidewalks are provided on both sides of all roads within the study area. Crosswalks are provided on all approaches of the signalized and unsignalized study area intersections. **Figure 2.2** illustrates the existing pedestrian facilities near the subject site.

## Pedestrian Network

## 2.3 Transit

Hamilton Street Railway (HSR) operates the public transit system in the City of Hamilton. **Figure 2.3** illustrates the existing transit network. **Figure 2.4** illustrates the existing transit stops within 500 metres (about a 5-minute walk) of the subject site<sup>2</sup>.

**Table 2.1** summarizes the HSR routes in operation along the study area roadways.

The existing transit routes provide opportunities for users to transfer to/from other HSR routes at various locations. They also provide connections to inter-regional GO Transit service in the City's Downtown area and the Hamilton "John C. Munro" International Airport (via the express #20 - A-Line). The express route operates with 30-minute headways between the airport and Pier 8 at the Hamilton Waterfront.

Route 35 (College) provides the most direct and convenient transit service to the site. Transit stops are provided internal to the subject site along the "St. Elizabeth Village Loop."

All HSR buses have accessible low floors with ramps that provide entry and exit without steps. This allows users to enter and exit the vehicles more easily. The HSR provides accessible transportation services in addition to the regular transit routes.

The *City of Hamilton Transportation Master Plan Review and Update*<sup>3</sup> identifies Rymal Road West as part of the BLAST network, specifically the S Line, which is a proposed frequent rapid transit system in the City of Hamilton. The timing for Rapid Transit along the Rymal Road corridor is considered long-term.

Figure 2.4

## 2.4 Traffic Volumes

Turning movement counts conducted by Paradigm for a typical weekday and a Saturday condition establish the existing traffic conditions. **Appendix B** contains the existing turning movement count data and signal timings. **Table 2.2** summarizes the dates of the turning movement counts at the study area intersections.

**TABLE 2.2: TURNING MOVEMENT SUMMARY**

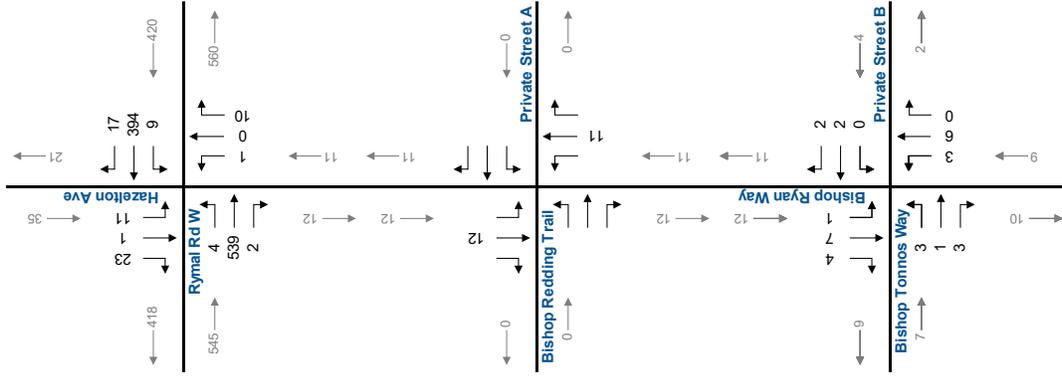

| Intersection   | Date         |              |
|--|--------------|--------------|
|  | Weekday      | Saturday     |
| Rymal Road West at<br>Hazelton Avenue/Bishop Ryan<br>Way | 13 June 2019 | 15 June 2019 |
| Bishop Tonnos Way at<br>Bishop Ryan Way                  | 13 June 2019 | 15 June 2019 |

To derive base year traffic volumes (Year 2023), the TMC data was factored to Year 2023 by using a 1% growth rate. The growth rate was provided in previous comments from the City of Hamilton.

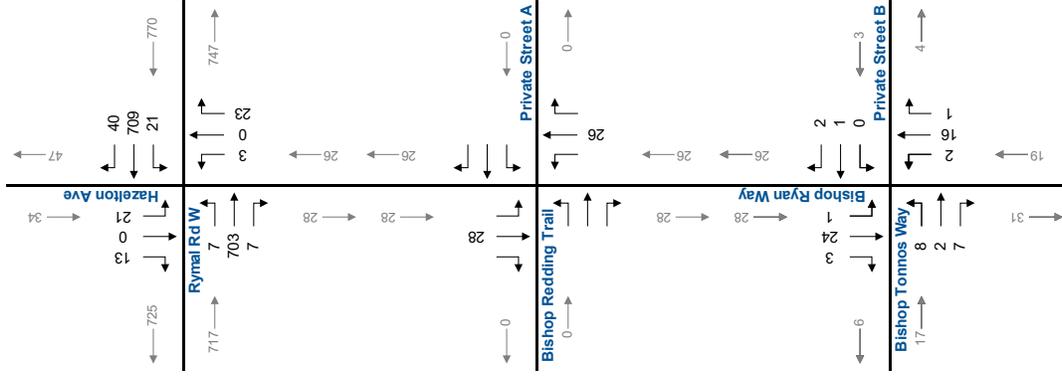

**Figure 2.5** illustrates the base year AM, PM, and Saturday peak hour traffic volumes.

PM Peak Hour

Saturday Peak Hour

# Base Year Traffic Volumes

## 2.5 Traffic Operations

Intersection Level of Service (LOS) is a recognized method of quantifying the efficiency of traffic flow at intersections. It is based on the delay experienced by individual vehicles executing the various movements. The delay is related to the number of vehicles desiring to make a particular movement, compared to the estimated capacity for that movement. The capacity is based on several criteria related to the opposing traffic flows. The highest possible rating is LOS A, under which the average total delay is equal or less than 10.0 seconds per vehicle. When the average delay exceeds 80 seconds at signalized intersections, the movement is classified as LOS F and remedial measures are usually implemented if they are feasible.

The operation of the intersections in the study area were evaluated using the existing lane geometry, traffic control, existing signal timings and the existing peak hour traffic. The intersection analysis considered three separate measures of performance:

- ▶ The level of service (LOS) for each turning movement
- ▶ The volume to capacity (v/c) ratio for each turning movement; and
- ▶ The 95th percentile queue length estimates using Synchro.

The level of service conditions on the existing road network have been assessed using Synchro 11 with HCM 2000 procedures. Queue reach was assessed using SimTraffic with ten 60-minute simulations with 15-minutes of seeding. Movements are considered critical<sup>4</sup> under the following conditions:

- ▶ Volume to capacity (v/c) ratios for through movements or shared through/turning movements at 0.85 or greater;
- ▶ V/C ratios for exclusive turning movements increase to 0.90 or greater;
- ▶ Queues for an individual movement are projected to exceed available turning lane storage; and
- ▶ At unsignalized intersections movements where the average delay is classified as LOS D or greater.

**Table 2.3** summarizes the LOS results for the AM, PM, and Saturday peak hours. The study area intersections are currently operating with acceptable level of service with no critical movements noted.

<sup>4</sup> City of Hamilton, *Traffic Impact Study Guidelines*, (Hamilton, July 2009).

**Appendix C** contains the supporting detailed Synchro and SimTraffic reports.

**TABLE 2.3: BASE YEAR TRAFFIC OPERATIONS**

| Analysis Period                       | Intersection                                      | Control Type | MOE   | Direction / Movement / Approach |         |       |          |           |         |       |          |            |         |       |          |            |         |       |          | Overall |

## 3 Development Concept

### 3.1 Description

The proposed Village Square development is part of the larger St. Elizabeth Master Plan development. The Village Square area located on the southeast corner of Rymal Road West and Hazelton Avenue/Bishop Ryan Way intersection.

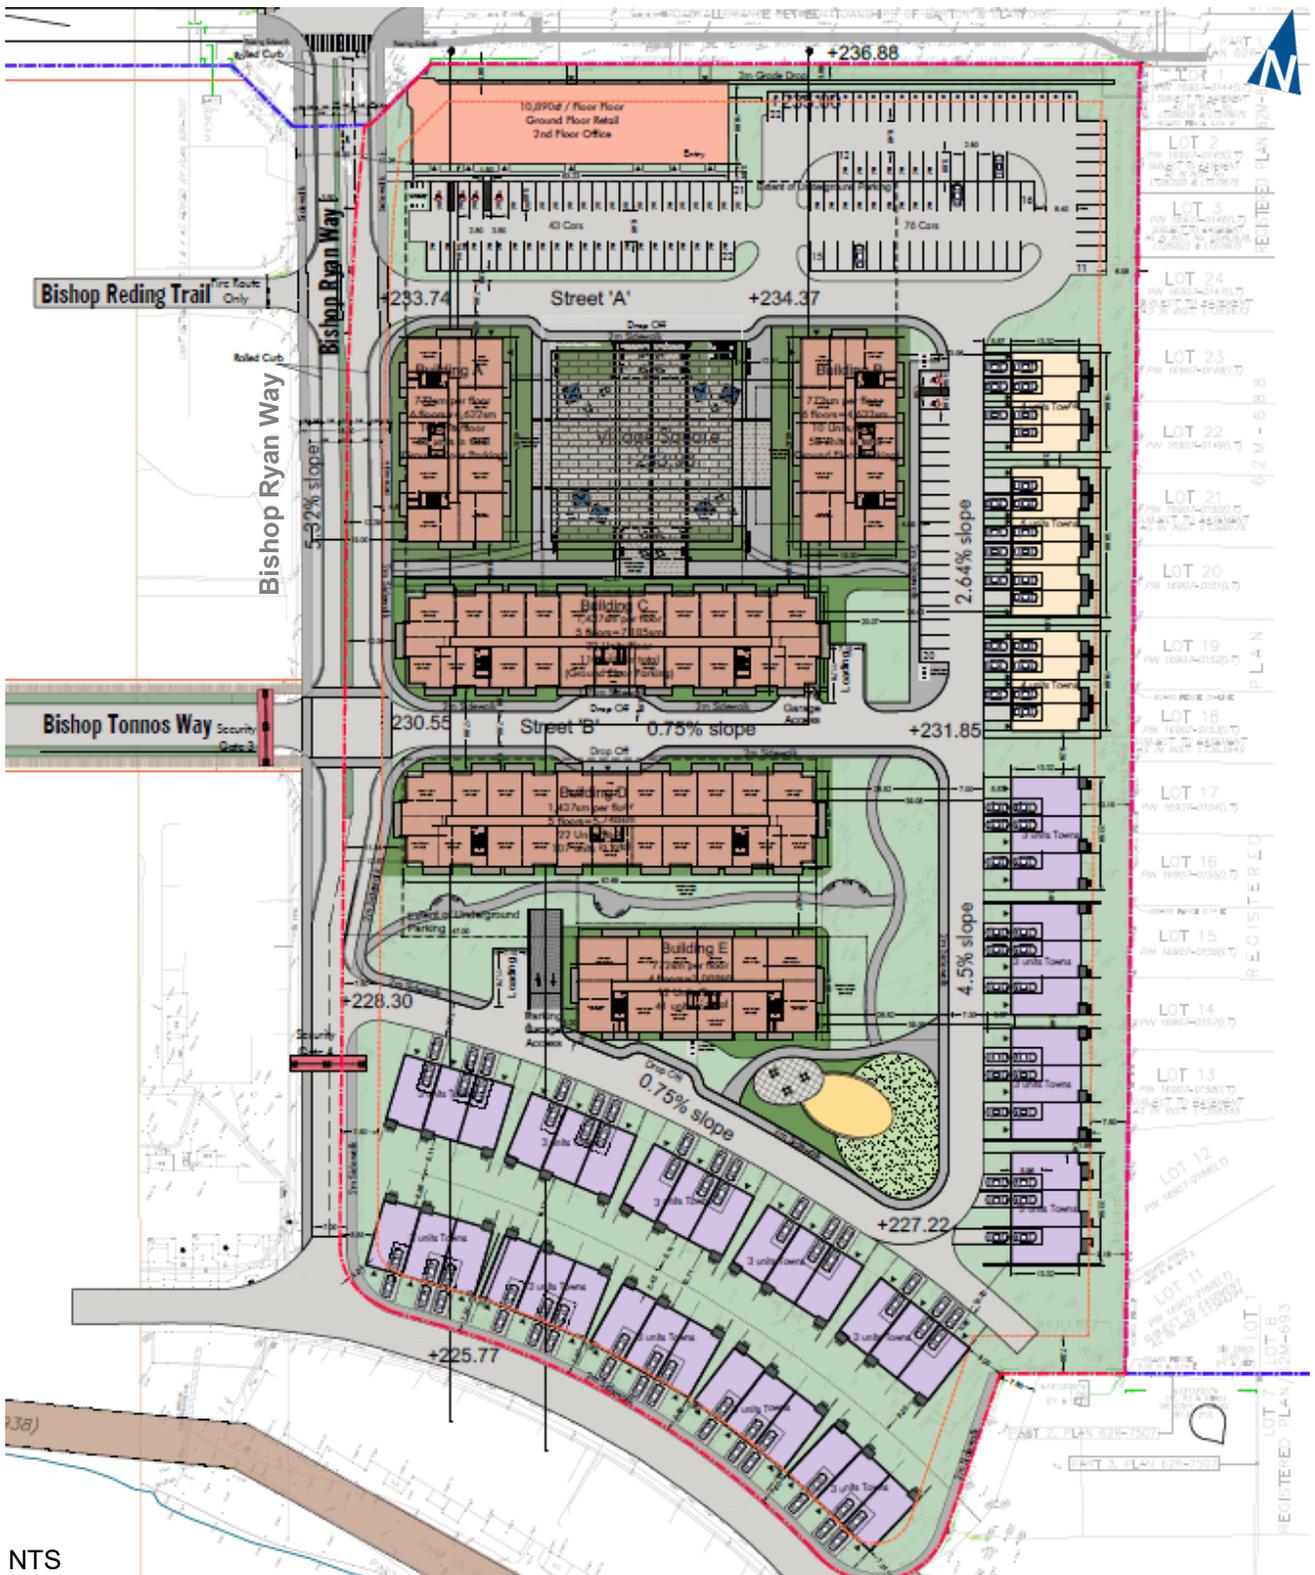

The Village Square concept includes approximately 1,012 m<sup>2</sup> (10,893 sq.ft.) of ground floor retail, 1,012 m<sup>2</sup> (10,893 sq.ft.) of second floor office, approximately 374 apartment units, and 56 townhome units.

Vehicle access is proposed via the existing signalized intersection of Hazelton Avenue/Bishop Ryan Way at Rymal Road West. Bishop Ryan Way forms the south leg of the intersection and will operate a private driveway. The concept plan illustrates a northbound left-turn lane with 30 metres of storage on Bishop Ryan Way at the Rymal Road West intersection.

Build-out is expected by the 2026 horizon year dependent on market conditions.

**Figure 3.1** shows the concept plan.

NTS

# Concept Plan

Figure 3.1

## 3.2 Proposed Road Network

The existing vehicular access point at Rymal Road West (Bishop Ryan Way) to the St. Elizabeth Village will be retained as part of the re-development. The current lane configuration (shared northbound left/through/right-turn) is maintained in the future traffic analysis.

The concept plan illustrates a northbound left-turn lane with 30 metres of storage on Bishop Ryan Way at the Rymal Road West intersection. A northbound left-turn lane should be provided on Bishop Ryan Way to provide lane balancing with the lane configuration on Hazelton Avenue. Having exclusive left-turn lanes opposite each other provides for safer left-turns as it makes it easier to identify which vehicles are turning or going straight through. The need for an exclusive northbound left-turn lane is outlined in **Section 5**.

Bishop Ryan Way will be maintained as a private roadway. A raised centre median on Bishop Ryan Way will be constructed from Rymal Road West to Bishop Tonnos Way converting the intersection of Bishop Ryan Way and Bishop Reding Way/Street A into right-in/right-out only intersections.

The intersection of Bishop Ryan Way and Bishop Tonnos Way/Street A is assumed to operate as an all-way stop control intersection.

### 3.2.1 Gate Operations

Public access to St. Elizabeth Village will be restricted by a gate system. The owner intends to utilize the same, or similar, gates that are in use today (Linear-Model No. BGU-12-3). The system operates using a sensor to detect a vehicle and a key fob/transmitter.

Based on preliminary gate information gathered, see **Appendix D**, the time a gate requires to open is 2.5 seconds. Using this information along with video of gate operations from the site, an estimate of 5 seconds for the overall gate operation (opening and closing) was determined.

A gate can accommodate approximately 720 vehicles per hour. With a gate provided in each direction this equates to a two-way peak maximum hourly capacity of 1,440 vehicles per hour. The maximum peak anticipated two-way hourly volume, experienced in the 2032 horizon, is anticipated to be approximately 200 vehicles per hour, which is well below the capacity of the gates. The gates are positioned approximately 10 metres from the curb face of Bishop Ryan Way which

would provide storage for approximately one passenger vehicle in front of the gates.

### 3.3 Trip Generation

The Institute of Transportation Engineers (ITE) Trip Generation Manual<sup>5</sup> is used to estimate the site trip generation. The following Land Use Codes (LUC) were used to estimate the site trip generation:

- ▶ LUC 220 – Multifamily Housing, Low-Rise (Dwelling Units) for the townhouse units
- ▶ LUC 221 - Multifamily Housing, Mid Rise (Dwelling Units) for the apartment units;
- ▶ LUC 710 – General Office Building (GFA per 1,000 sq.ft.); and
- ▶ LUC 822 – Strip Plaza, <40K (GFA per 1,000 sq.ft.).

Regression equation rates were used where applicable to calculate the trips generated by the subject site for all land uses. No internal trips or modal split was calculated. Pass-by trips for LUC 820 (Shopping Center) was used for LUC 822 for the PM and Saturday peak hours as LUC 822 pass-by trip percentages are not provided by ITE.

**Table 3.1** summarizes the estimated trip generation. Upon full build-out, the site's net trip generation is estimated to be approximately 222 AM peak hour vehicle trips, 239 PM peak hour vehicle trips and 234 Saturday peak hour trips.

---

### 3.4 Trip Distribution and Assignment

**Table 3.2** summarizes the estimated trip distribution for the weekday AM, PM, and Saturday peak hours. The distribution for the site generated traffic has been developed using data from the 2016 Transportation Tomorrow Survey (TTS)<sup>6</sup> and existing travel patterns within the study area. **Appendix E** contains the TTS calculations.

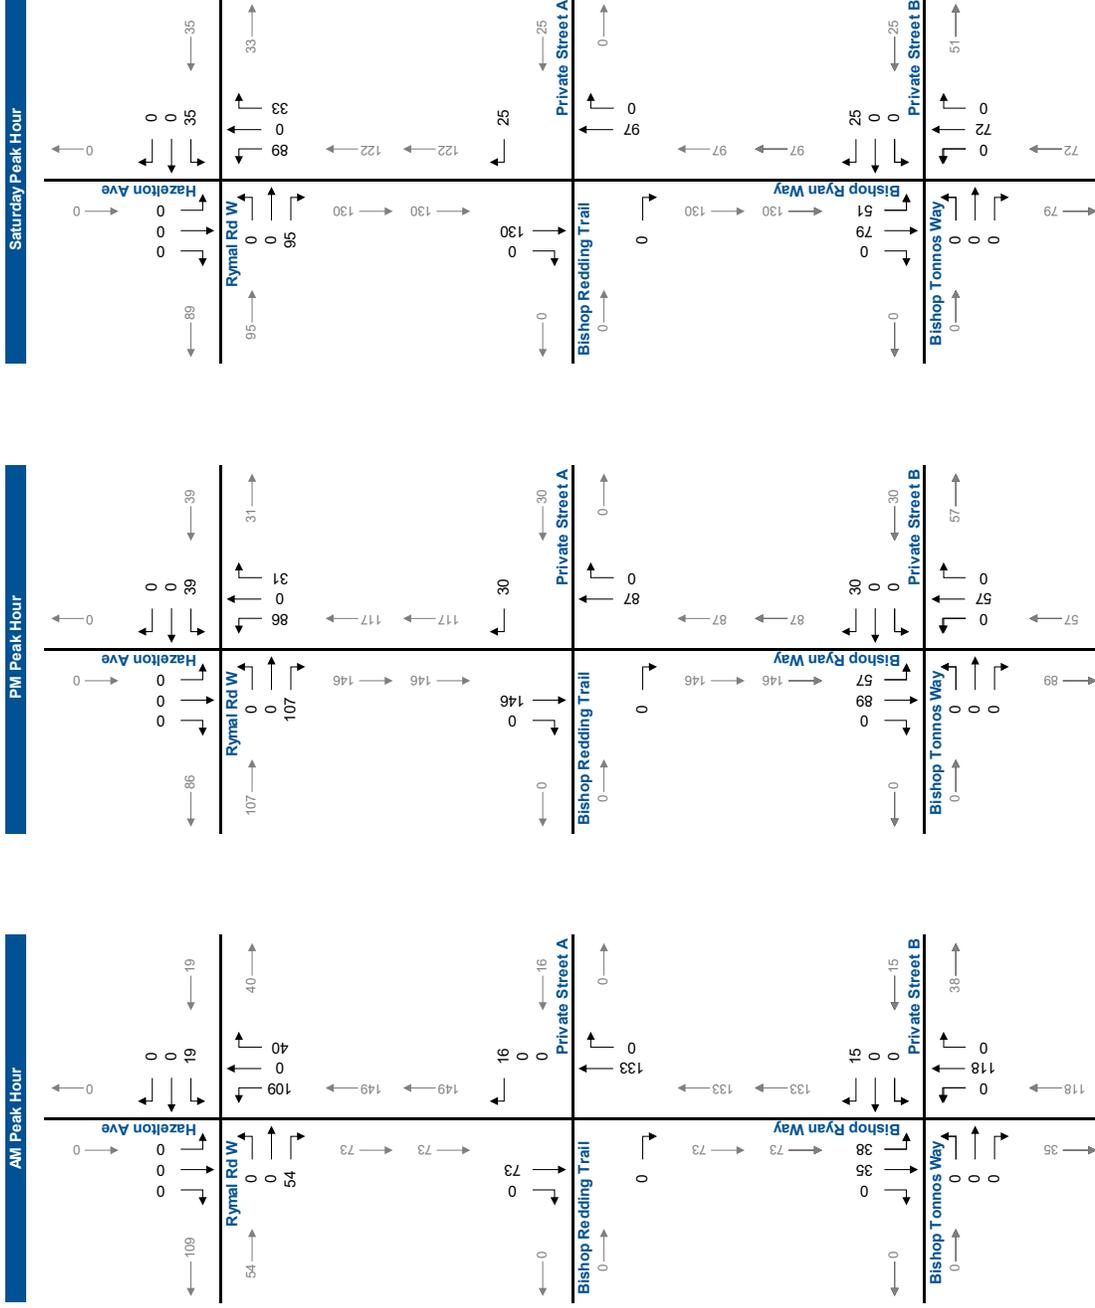

**TABLE 3.2: TRIP DISTRIBUTION**

| Direction                                 | Inbound     | Outbound    |
|---|-------------|-------------|
| North via Upper James Street/Garth Street | 43%         | 43%         |
| East via Rymal Road                       | 27%         | 27%         |
| South via Upper James Street/Garth Street | 10%         | 5%          |
| West via Rymal Road                       | 20%         | 25%         |
| <b>Total</b>                              | <b>100%</b> | <b>100%</b> |

**Figure 3.2** illustrates the site generated traffic volumes for the weekday AM, PM, and Saturday peak hours. **Figure 3.3** illustrates the pass-by traffic volumes for the weekday AM, PM, and Saturday peak hours for the commercial land uses.

## 4 Future Traffic Conditions

The assessment of future conditions in this section includes the following components necessary to assess the traffic implications on the adjacent road network:

- ▶ Future background traffic estimates
- ▶ Level of service analysis for background traffic (pre-development)
- ▶ Future total traffic estimates; and
- ▶ Level of service analysis for total traffic (post-development).

### 4.1 Forecast Traffic Volumes

The likely future traffic volumes are estimated to consist of:

- ▶ Increased non-site traffic (generalized background traffic growth) estimated to be 1% per annum;
- ▶ Traffic generated by adjacent future developments including:
  - Upper Mill Pond consists of 157 residential units and a 902 square metre fitness/recreation centre and is located within the St. Elizabeth Village site;
  - 35 Sabrina Boulevard consists of 331 townhouse units and is located on the north side of Sabrina Boulevard east of Garth Street;
  - 384-400 Rymal Road West consists of a three-storey residential care facility with 115 beds and is located near the north-east corner of Rymal Road West and Garth Street;
  - 1670 Garth Street consists of two 10-storey mixed-use buildings with 177 residential units and 445 square metres of ground floor retail located on the south/west corner of Garth Street and Rymal Road West;
  - 393 Rymal Road West, the remainder of the St. Elizabeth Village re-development site generated traffic; and
- ▶ Traffic generated by the subject site.

The ITE Trip Generation Manual was used to estimate the site trips for all background developments. **Appendix F** contains the trip generation and trip distribution for the above noted background developments .

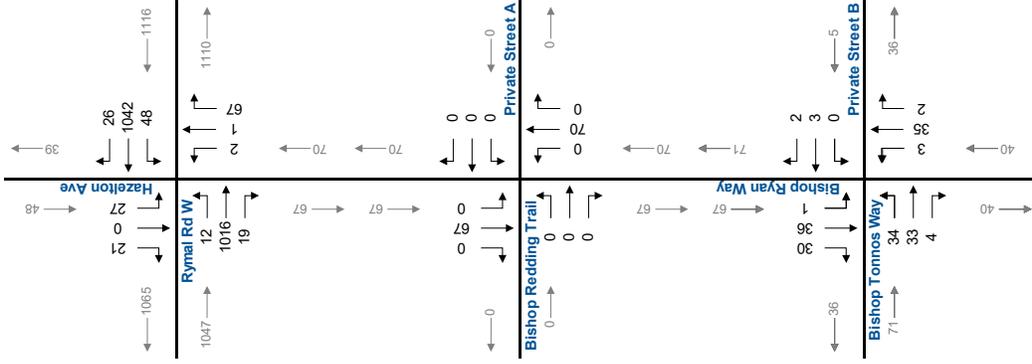

**Figure 4.1** illustrates the future background traffic volumes reasonably expected to occur by 2031 for the weekday AM, PM, and Saturday peak hours.

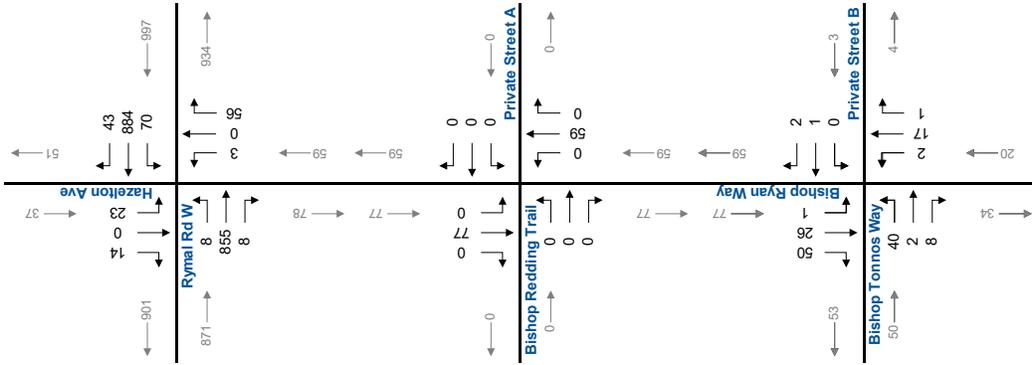

**Figure 4.2** illustrates the future total traffic volumes for the weekday AM, PM, and Saturday peak hours.

## 4.2 Forecast Background Traffic Operations

The operations of the intersections under the future background traffic opening date horizon were evaluated using the same analytical approach that was used for the existing traffic operations.

Signal timings remain the same as existing conditions to identify any improvements required based on the future traffic forecasts.

**Table 4.1** summarizes the resulting level of service conditions for the weekday AM, PM, and Saturday peak hours.

All study area intersections are forecast to operate with overall acceptable level of service during the analysis periods with the following critical movements noted:

- ▶ Rymal Road West and Hazelton Avenue/Bishop Ryan Way
  - Westbound left-turn – queue length exceeds available storage during PM and Saturday peak hours. The queue reach can be accommodated in the existing centre two-way left-turn lane.

The average queue length forecast for the westbound left-turn movement is approximately 17 metres during the PM peak hour and 15 metres during the Saturday peak hour. Both these average queue reaches can be accommodated in the 30 metres of available storage.

**Appendix G** contains the supporting detailed Synchro and SimTraffic reports.

MOE - Measure of Effectiveness

LOS - Level of Service

Delay - Average Delay per Vehicle in Seconds

Q - 95th Percentile Queue Length (m)

Ex. - Existing Available Storage (m)

Avail. - Available Storage (m)

TCS - Traffic Control Signal

TWSC - Two-Way Stop Control

</> - Shared Turning Movement

### 4.3 Forecast Total Traffic Operations

The operations of the study area intersections were evaluated using the same analytical approach that was used for the existing and background traffic operations.

Signal timings remain the same as existing conditions to identify any improvements required based on the future traffic forecasts.

**Table 4.2** summarizes the resulting level of service conditions for the weekday AM, PM, and Saturday peak hours.

The following critical movements are noted:

- ▶ Rymal Road West and Hazelton Avenue/Bishop Ryan Way
  - Eastbound through/right-turn – LOS D and v/c ratio of 0.98 during Saturday peak hour; and
  - Westbound left-turn – LOS F, v/c ratio greater than 1.00, and queue length exceeds available storage during PM peak hour and queue length exceeds available storage during Saturday peak hour.

**Appendix H** contains the supporting detailed Synchro and SimTraffic reports.

The proposed Street A right-in/right-out intersection and Bishop Tonos Way/Street B intersection with Bishop Ryan Way are forecast to operate with low levels of delay and v/c ratios during the analysis periods assessed.

**TABLE 4.2: TOTAL TRAFFIC OPERATIONS**

MOE - Measure of Effectiveness

LOS - Level of Service

Delay - Average Delay per Vehicle in Seconds

Q - 95th Percentile Queue Length (m)

Ex. - Existing Available Storage (m)

Avail. - Available Storage (m)

TCS - Traffic Control Signal

TWSC - Two-Way Stop Control

</> - Shared Turning Movement

## 5 Remedial Measures

As noted in **Section 4** above, there are individual turning movements that are forecast to operate above critical thresholds under future traffic conditions. The following provides recommendations to assist in mitigating these critical movements.

### 5.1 Rymal Road at Hazelton Avenue/Bishop Ryan Way

The westbound left-turn is forecast to have 95<sup>th</sup> percentile queue lengths that exceed its storage length starting from the background horizon (43 metres greater than available storage during the PM peak hour). While the queue reach can be accommodated in the centre two-way left-turn lane, with the addition of the site generated traffic, the westbound left-turn will operate at LOS F and approaching/exceeding capacity.

Synchro analysis was done for the intersection of Rymal Road and Hazelton Avenue/Bishop Ryan Way using the total traffic volumes and the following improvements:

- ▶ Northbound left-turn lane to provide lane balancing with the lane configuration of Hazelton Avenue; and
- ▶ Optimized signal phases while still maintaining the previous cycle length.

**Table 5.1** summarizes the resulting level of service conditions. **Appendix I** contains the supporting detailed Synchro and SimTraffic reports.

With optimized signal phases the delays forecast to occur for the westbound left-turn movement is mitigated. The queue reach is still expected to exceed the available storage lane length during the PM peak hour (by 11 metres) and Saturday peak hour (by 17 metres). The queue reach can be accommodated in the centre two-way left-turn lane. The reported average queue length for the westbound left-turn movement is 22 metres during the PM peak hour and 22 metres during the Saturday peak hour. These average queue reach can be accommodated in the 30 metres of storage.

To accommodate the queue for the northbound left-turn movement 30 metres of storage is required. The concept plan illustrates a northbound left-turn lane with 30 metres of storage. The forecast queue reach for the northbound through/right-turn movement is not expected to block vehicles from entering the northbound left-turn lane.

**TABLE 5.1: TOTAL OPERATIONS WITH REMEDIAL MEASURES**

| Analysis Period | Intersection                                      | Control Type | MOE   | Direction / Movement / Approach |         |       |          |           |         |       |          |            |         |       |          |            |         |       |          | Overall |    |      |      |    |      |      |    |      |

## 6 Parking Justification

### 6.1 Proposed Parking Supply

The site's proposed vehicle parking supply is 547 spaces and is comprised of:

- ▶ 139 surface spaces;
- ▶ 296 underground spaces; and
- ▶ 112 townhome spaces .

A total of 216 long-term and 30 short-term bicycle parking spaces will be provided.

### 6.2 Zoning By-Law Requirements

The City of Hamilton's Zoning By-Law 05-200 prescribes parking ratios for all zones outside of the downtown core. The following parking ratios are noted:

- ▶ Multiple Dwelling (Commercial and Mixed-Use)
  - Units less than 50 m<sup>2</sup> a minimum of 0.3 spaces per unit to a maximum of 1.25 spaces per unit; and
  - Units greater than 50 m<sup>2</sup> – a minimum of 0.7 spaces per unit for the first 14 units, 0.85 spaces per unit for units 15 through 50, 1.0 spaces per unit for units remaining units over 51, and a maximum of 1.25 spaces per unit.
- ▶ Retail within a Commercial and Mixed-Use Zone
  - Medical Clinic (most restrictive) – 1.0 space for each 16.0 m<sup>2</sup> any gross floor area; and
  - Office – 0 spaces where a use is less than 450.0 m<sup>2</sup> in gross floor area, and 1 space for each 30.0 m<sup>2</sup> of gross floor area which accommodates such use, for that portion of a building that is in excess of 450.0 m<sup>2</sup>.

**Table 6.1** summarizes the Zoning By-Law parking requirement. The zoning requirement for the subject site is calculated to be 402 to 620 spaces. With a proposed supply of 547 parking spaces, the site's parking supply is within the zoning by-law design domain.

**TABLE 6.1: ZONING BY-LAW PARKING REQUIREMENT**

| Land Use                       |                      | Parking Rates |                       | Required Parking |            |
|--------------------------------|----------------------|---------------|-----------------------|------------------|------------|
| Apartment                      | Units                | Min           | Max                   | Min              | Max        |
| < 50.0 m <sup>2</sup>          | 26                   | 0.30          | 1.25                  | 8                | 33         |
| >50.0 m <sup>2</sup>           | 1-14                 | 0.70          | 1.25                  | 10               | 435        |
|                                | 15-50                | 0.85          |                       | 31               |            |
|                                | 298                  | 1.00          |                       | 298              |            |
| Townhouses                     | Units                | Min           | Max                   | Min              | Max        |
| < 50.0 m <sup>2</sup>          | --                   | --            | --                    | --               | --         |
| >50.0 m <sup>2</sup>           | 56                   | 1.00          | 1.25                  | 56               | 70         |

| <b>Total</b>                   |                      |               |                       | <b>402</b>       | <b>620</b> |

### 6.3 Residential Parking Standards Review and Update

The City of Hamilton recently prepared a review and update of city parking standards for residential uses<sup>7</sup>. Minimum parking requirements recommended within the review are subject to change and have not been approved by council. The subject site is located within Parking Area 2 (PRA 2) which generally includes most of the area on top of the escarpment. The proposed parking requirements for multiple dwellings in PRA 2 is reduced compared to the Zoning By-Law 05-200 rates.

Should the proposed changes be adopted by Council, the site's parking supply will remain within the domain outlined in the draft by-law (that is, above the minimum supply and below the maximum supply).

<sup>7</sup> City of Hamilton, Residential Parking Standards Review and Update (PED23156) (City Wide), August 2023.

## 6.4 Summary

Based on zoning by-law parking requirements, the subject site is estimated to have a parking requirement of between 402 to 620 spaces. The proposed parking supply of 547 spaces exceeds the minimum requirement.

The site's proposed parking supply is sufficient and is forecast to accommodate the site's parking demand. Visitor parking for the residential units and the commercial land uses should be shared.

The City of Hamilton recently prepared a review and update of city parking standards for residential uses. Should the proposed changes be adopted by Council, the site's parking supply will remain within the domain outlined in the draft by-law (that is, above the minimum supply and below the maximum supply).

## 7 Conclusions and Recommendations

### 7.1 Conclusions

The main findings and conclusions of this study are as follows:

#### Transportation Impact Assessment

- ▶ **Existing Traffic Operations:** The study area intersections are operating with acceptable levels of service during the weekday AM, PM, and Saturday peak hours.
- ▶ **Site Trip Generation:** Upon full build-out, the subject site's total net trip generation is approximately 222 AM peak hour trips, 239 PM peak hour trips, and 234 Saturday peak hour trips.
- ▶ **Background Traffic Operations:** the study area intersections are forecast to operate with acceptable levels of service during the weekday AM, PM, and Saturday peak hours. The following critical movements are noted:
  - Rymal Road West and Hazelton Avenue/Bishop Ryan Way
    - Westbound left-turn – queue length exceeds available storage during PM and Saturday peak hours. The westbound left-turn queue reach can be accommodated in the centre two-way left-turn lane. The average queue lengths can be accommodated in the westbound left-turn storage lane during the PM and Saturday peak hours.
- ▶ **Total Traffic Operations:** The capacity deficiencies identified under background conditions will continue to occur with the addition of the site generated traffic. Site generated traffic results in the following critical movements:
  - Rymal Road West and Hazelton Avenue/Bishop Ryan Way
    - Eastbound through/right-turn – LOS D and v/c ratio of 0.98 during the Saturday peak hour; and
    - Westbound left-turn – LOS F, v/c ratio greater than 1.00, and queue length exceeds available storage during the PM peak hour.
- ▶ **Remedial Measures:** To improve operations at the Rymal Road West and Hazelton Avenue/Bishop Ryan Way intersection an exclusive northbound left-turn lane as well as optimized signal phasing timing could be implemented upon build-out of the subject site. The concept plan illustrates a northbound left-turn lane with 30 metres of storage, which is forecast to contain the expected queue length.

With the improvements, the intersection of Rymal Road West and Hazelton Avenue/Bishop Ryan Way is forecast to operate with acceptable levels of service.

### **Parking Study**

- ▶ The proposed parking supply is 547 spaces.
- ▶ The proposed development requires a total of 402 to 602 parking spaces to comply with the City's Zoning By-law. With a proposed supply of 547 parking spaces the site's parking supply is within the zoning by-law design domain.

## **7.2 Recommendations**

Based on the findings of this study, it is recommended that:

- ▶ The City of Hamilton consider optimizing signal phases timings at the Rymal Road West and Hazelton Avenue intersection upon build-out of the subject site.
- ▶ The northbound left-turn lane on Bishop Ryan Way at Rymal Road West be constructed with at least 30-metres of storage.
- ▶ Parking for non-residents (visitors) be shared between all land uses.

393 Rymal Road West, Hamilton (Ward 8)  
25T-202003, UHOPA-20-017 & ZAC 20-029 (Previous Files: FC-19-003)

Paradigm Transportation Solutions Limited is preparing a Transportation Impact Assessment and Parking Study for a proposed mixed-use development of the lands 393 Rymal Road West, Hamilton. This is focusing on the Village Square portion of the St. Elizabeth Village (SEV) development.

Below is a brief description of the concept and our proposed terms of reference for the TIS and Parking study. Please review and provide comment at your earliest convenience.

### **SITE DESCRIPTION**

-  
The Village Square area of the site is located on the southeast quadrant of Rymal Road West and Bishop Ryan Way. The property owner is proposing to develop the Village Square area with a variety of commercial and residential land uses. The development statistics will be finalized prior to commencing work.

Vehicle access is proposed by Bishop Ryan Way, which is a private driveway. Bishop Ryan Way is no longer contemplated as a municipal right-of-way. The majority of the Village Square area will be separated from the St. Elizabeth Village complex by security gates. The site's parking supply and the associated zoning requirements are unknown.

### **PROPOSED TERMS OF REFERENCE**

-  
Study Area Intersections:

- Rymal Road West at Hazelton Avenue/Bishop Ryan Way (signalized)
- Bishop Ryan Way at Bishop Reding Way/Private Street A (unsignalized)
- Bishop Ryan Way at Bishop Tonnos Way/Private Street B (unsignalized)

Analysis Periods:

- Weekday AM peak hour
- Weekday PM peak hour

Horizon Year

- Five-years from the assumed full build-out (assumed Year 2031).

Existing Data:

- Eight Hour TMC at the study area intersections

## Analysis

- Synchro 11

## Background Traffic

- Generalized growth rate: **2% per annum** to be consistent with previous April 2022 TIS
- Active Development Applications used in previous April 2022 TIS plus the other SEV site generated traffic.

## Trip Generation

- ITE Trip Generation Data 11<sup>th</sup> Edition with no modal split reductions.

## Site Traffic Distribution

- Same as previous April 2022 TIS

## Parking Study:

- To estimate the parking demand generated by the proposed development and establish the number of on-site parking spaces that should be provided, recognizing site constraints and local conditions. If needed, a strategy would be developed to satisfy the parking demands of the proposed development.

## Report

- We will document the study methodologies, findings, and conclusions in a report with appendices containing the detailed analysis results and any data collected.

Please let us know your comments on the study.

Thank you and regards.

# City of Hamilton - Traffic Traffic Signal Controller Timing Data

Intersection: **Bishop Ryan/Hazelton at Rymal**

Controller Type: **Intelight** Page 1 of 15  
Programmed By: **DLB** Installed By: \_\_\_\_\_  
Date: **08-Jan-18** Date: \_\_\_\_\_

- φ1:
- φ2: Rymal - EB, South Xwalk
- φ3:
- φ4: Hazelton - SB, West Xwalk
- φ5:
- φ6: Rymal - WB, North Xwalk
- φ7:
- φ8: Bishop Ryan - NB, East Xwalk

Flash Operation: Red: Rymal  
Red: Bishop Ryan / Hazelton

**SEQUENCE/START-UP (MM-3-1-1)**

**START-UP PHASES/INTERVAL/SEQUENCE**

(X = Enable for start-up phases. Must be compatible if more than one)

|          |          | 1   | 2  | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 |

| START-UP | Phases   |     |  |   | X |   |   |   | X |   |    |    |    |    |    |    |    |
|          | Interval | 0   | (0=Red, 1=Yel, 2= Grn, determines color of selected phases above on start-up)                            |   |   |   |   |   |   |   |    |    |    |    |    |    |    |
|          | Flash    | 10  | (0-255 seconds start-up flash time)  |   |   |   |   |   |   |   |    |    |    |    |    |    |    |
|          | Red      | 5.0 | (0-25.5 secs = length of first red after start-up if start-up in yellow or red)                          |   |   |   |   |   |   |   |    |    |    |    |    |    |    |
|          | Sequence | 3   | (2=single ring, 3=dual ring, 4=123/567+48, 5=12/56+3478, 6=1234/56+78, 7=1234/5678, 8=dual quad, 9=12ph) |   |   |   |   |   |   |   |    |    |    |    |    |    |    |

**PHASE RING ASSIGNMENTS**

X = Phase assigned to ring (if used). Phases in different rings but same co-phase group can time together.

|      |        | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 |
|------|--------|---|---|---|---|---|---|---|---|---|----|----|----|----|----|----|----|
| RING | Ring 1 |   | X |   | X |   |   |   |   |   |    |    |    |    |    |    |    |
|      | Ring 2 |   |   |   |   |   | X |   | X |   |    |    |    |    |    |    |    |
|      | Ring 3 |   |   |   |   |   |   |   |   |   |    |    |    |    |    |    |    |
|      | Ring 4 |   |   |   |   |   |   |   |   |   |    |    |    |    |    |    |    |

**CO-PHASE GRP 1-4 ASSIGNMENTS**

X = phase assigned to co-phase group. All ph's assigned to rings must be assigned to co-phase group.

|          |         | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 |

Dual Entry = Left column phase automatically places call on selected phase(s) if no other real calls within selected phases ring and co-phase group

**SELECTION SOURCE (MM-3-2-2)**

Entries determine how parameters get selected

|                |          |                    |
|----------------|----------|--------------------|
| Cycle Source:  | <b>1</b> | 0=TOD, 1=CL, 2=INT |
| Split Source:  | <b>1</b> | 0=TOD, 1=CL, 2=INT |
| Offset Source: | <b>1</b> | 0=TOD, 1=CL, 2=INT |

|                   |            |                    |
|-------------------|------------|--------------------|
| Free Source:      | <b>1</b>   | 0=TOD, 1=CL, 2=INT |
| Flash Source:     | <b>0</b>   | 0=TOD, 1=CL, 2=INT |
| Inter-TOD Revert: | <b>255</b> | 0-255 SECS         |

TOD = Time of day control by internal clock, CL = Closed loop (comm), INT = Interconnect. Inter-TOD Revert is time allowed after failed interconnect before unit reverts to TOD (Time Base) control.

**COORD BASIC OPTIONS (MM-3-2-3)**

|   |          |  |
|---|----------|--|
| Reference to End (vs. begin) of Main St.: | <b>N</b> | Y/N: Y = Offset references to end of main st. green. N = Beginning of Main st. green.  |
| Use % (vs. secs) for Phase Allocation:    | <b>N</b> | Y/N: Y = Phase allocations loaded as percent of 100. N = Allocations in seconds.       |
| Use % (vs. secs) for Offset Entry:        | <b>N</b> | Y/N: Y = Offset loaded as percent of 100. N = Offset loaded in seconds.                |
| Use Fixed (vs. floating) Force Offs:      | <b>Y</b> | Y/N: Y = Force offs are fixed to cycle. N=Force offs like max times, begin with green. |
| Permissive Type:                          | <b>1</b> | 0-2: 0=Yield, 1= Single, 2= Multiple. See Permissives note below                       |

**CIRCUIT OVERRIDES (MM-3-3-6)**

**CONTROLLER DATA**

January 2019

For each circuit specify TOD (time of day controlled), or manually ON or OFF. Default = TOD

When mode = Time dependent, enter reference times of day for each cycle. Default = 00:00 = midnight = most commonly used reference. When mode = C/O/S Event, cycle restarts on each COS change. Only use this mode for specific reasons. Time dependent most common used mode.

## Gate Operations

# BARRIER GATE OPERATORS

## Models BGU & BGU-D

### COMMON FEATURES

- Top mountable, easily accessible APeX controller
- Lockable galvanized steel cabinet with white or yellow powder coat finish
- 10', 12', or 14' wood arm included
- Heavy-duty right-angle oil bath gear reducer
- Heavy-duty harmonic link with bronze bushings
- UL325/UL991 compliant 24VDC control board

### BGU-D FEATURES:

- Full time DC powered battery backup with seamless transition
- Full-time ½ HP DC motor
- Selectable fail safe or fail secure modes of operation
- Solar power capable
- Batteries included

**Linear**<sup>®</sup>  
*Building On Innovation.*

**BGU**  
115 VAC

**BGU-D**  
Full-time DC powered  
battery backup

### ELECTRICAL

- Solid state 24V control board UL325/UL991 compliant
- Diagnostic LED display for ease of setup and trouble shooting
- Integral entrapment sensing system with digital set point for accurate adjustment and enhanced safety
- Integrated maximum run and auto close timers
- Built-in dual gate capability using 3-wire shielded cable
- 24V DC power available for access control accessories

### MECHANICAL

- Conveniently located top mounted controller
- Lockable powder coated cabinet available in yellow or white
- 10', 12', or 14' wood gate arm included, painted white with yellow and black warning tape on both sides
- Heavy-duty gate arm clamp with integrated cutting bracket

Model BGU-D shown with optional thermostatically controlled heater

#### 1 APeX Controller

- UL325/UL991 compliant 24VDC control module
- Full featured for access control, security, and entrapment protection
- Integral MegaCode receiver
- On-board 3-button station

#### 2 Cam operated limits

- Easily accessible through access door

#### 3 Heavy-duty drive components

- Oil bath gear reduction
- Harmonic link with oil impregnated bronze bushings
- Dual V-belt drive

#### 4 Standard convenience features

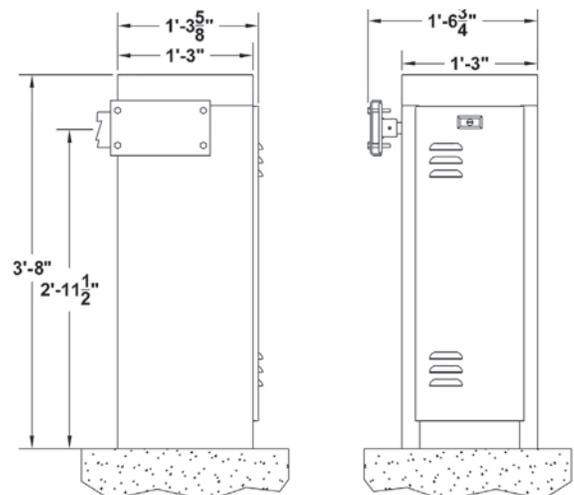

- Power on/off button
- Accessory power outlet on 115V operators

#### 1 APeX Controller Inside

Model BGU top view

### Dimensions

## CAUTIONS

- Automatic gates are not for pedestrians
- Automatic gate operators are designed for vehicular traffic only; operators are powerful and can cause serious injury or death; DIRECT ALL PEDESTRIAN TRAFFIC TO A SEPARATE PEDESTRIAN GATE
- UL325 requires use of contact or non-contact anti-entrapment devices
- ASTM F2200 requires that all exposed rollers are covered

Intersection Summary  
 ~ Volume exceeds capacity, queue is theoretically infinite.  
 ~ Queue shown is maximum after two cycles.  
 # 95th percentile volume exceeds capacity, queue may be longer.  
 ~ Queue shown is maximum after two cycles.
